Colloquy

A Mac OS X Internet Chat client.

Overview | Screenshots | Downloads | Donations | Support & Development

Traditionally, chat clients on the Mac have been anything but glamorous. Colloquy is an advanced IRC, SILC & ICB client which aims to fill this void. By adhering to Mac OS X interface conventions, Colloquy has the look and feel of a quality Mac application.

AppleScript
A powerful dictionary for easy scripting.

IRC, SILC & ICB Compatibility
The result of years of chat experience.

Plug-In Love
Unlimited extensability through Plug-Ins.

Styled For You
Pick the look for your conversations.

Colors of the World
Fully compatible with mIRC colors.

Open Minded
Open source, like it should be.

Unintrusive Interface
Sleek multi- or single-window modes.

File Transfer Medly
Full DCC transfer support with resume.

They're Your Buddies
A buddy list for your IRC friends.

Express Yourself
Use the emotions that speak for you.

Multiplicity
The freedom to chat on multiple servers.

Much, Much More!
Just a better experience all-around.

Testimonials:

"Colloquy is IRC for designers."
—B. Gold

"I have been trying to find a decent OS X IRC client for 2 years. You have just made the best IRC client for OS X."
—D. Jennings

"I haven't used IRC in years, and this makes me enjoy it again."
—A. Rose

"Colloquy was one of the better designed clients with 1.0 already but now it's an extra class. Great job."

"This is the IRC client that I would have built if I wasn't spending all my time on Camino."
—M. Pinkerton

"What you have here is the beginnings of the best Applescriptable IRC client for the Mac."
—B. Young

Colloquy

A Mac OS X Internet Chat client.

Overview | Screenshots | Downloads | Donations | Support & Development

Colloquy 2.4.2 (5815)
The latest build on *5/20/2013* can be downloaded here (6.92 MB). Requires OS X 10.7 (Lion) and a 64-bit Intel Mac.

This release does **not** support Mac OS X 10.5 (Leopard) or Mac OS X 10.6 (Snow Leopard). Please update to Mac OS X 10.7 (Lion) to receive further updates and support for Colloquy. The last supported release for Leopard and Snow Leopard can be found here.

Changes in this Release

- **Changes**
  - Built-in server list connects to chat.freenode.net instead of irc.freenode.net
  - Accessibility enhancements! (Thanks to Boris Dušek for the patch!)
  - Show default ports for services other than IRC. (Thanks to Gilles Gauthier for the patch!)
- **Fixes**
  - Disable ERROR alerts when reopening Colloquy after being put to sleep.
  - Remove the ',' from the default port list. (Thanks to Gilles Gauthier for the patch!)
  - Issues that would prevent DCC from working. (Thanks to pepijndevos for the patch!)

You can also subscribe to our Appcast RSS feed which always has the latest release and older release notes.

8. Yay! You're here. Now you need to register your nickname that you chose earlier with freenode, so no one can pretend to be you.

type:

/msg NickServ REGISTER [password] [your@email.com]

into the chat below. You should receive confirmation from the NickServ account that your name has been registered, and that you need to login to your email to confirm your account.

Close the chat window, confirm your account from your email, and then rejoin. You should now be prompted for your username and password. And you're done!
